

RECC's Renewable Energy Policies

The maximum size of eligible renewable systems that can be connected under RECC's Net Metering Policy is 10 KW. The total capacity of all wind, solar or other renewable systems that can be connected to the cooperative's lines is 2 percent of our annual peak demand (512 KW).

Important: Please call RECC before installation

If you're considering a solar system, remember that it is your responsibility to contact RECC while you are still in the design phase. Please contact Chris Bridges, Nick Hays, or Jeff Lancaster if you have any questions (217-438-6197).
